## Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on March 16, 2006 has been entered.

## Claims Allowed

Claims 1-19 remain allowable over the prior art of record. The claims are allowable because the prior art does not anticipate nor render obvious the claimed combination of: a clutch controller of a mechanical automatic transmission that enables automatic transmission operation by means of providing a mechanism with an actuator and transmission gear a clutch mechanism with an actuator, the controller comprising: engine speed detection means for detecting an engine speed; accelerator position detection means for detecting position of an accelerator; range setting means for setting an engine speed range which engine output torque falls within a predetermined range including a maximum value at position of said accelerator detected by said accelerator position detection means; and control means which effects direct engagement a clutch when a vehicle is pulled away while controlling a connected state of said clutch such that the engine speed detected by said engine speed detection means falls within said engine speed range set by said range setting means; or: a method for controlling a clutch of an automatic transmission which enables mechanical automatic transmission operation by means providing a transmission gear mechanism with an actuator and a clutch mechanism with an actuator, the method

comprising the steps detecting an engine speed and the an accelerator; position of setting a first threshold value at an engine speed lower than an engine speed at which said engine output torque becomes maximum at said detected position of said accelerator and setting a second threshold value at an engine speed higher than said engine speed; and effecting direct engagement of said clutch while controlling a connected state of said clutch such that said detected engine speed falls between said set first threshold value and said second threshold value.

No particular single feature of the claims renders the claims as a whole patentable. Only the claims taken as a whole combination is deemed new and unobvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Prior Art Discussed

The examiner has considered the references cited by applicant in his Information

Disclosure Statement filed March 16, 2006. None of the references show all of the features of the claimed invention.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dirk Wright whose telephone number is 571-272-7098. The examiner can normally be reached on Monday through Friday, 8AM-4:30PM.
